DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, 28, drawn to a method of eliciting protection from a pathogen causing disease, classified in class 435, subclass 6.
- II. Claims 3, 25-26, drawn to method of protecting against a pathogen by edible potion of transgenic plant, classified in class 800, subclass 205.
- III. Claims 4-10, drawn to eliciting protection from a pathogen by oral administration of a bacterial enterotoxin, classified in class 435 subclass 7.32.
- IV. Claims 11-24, and 27, drawn to method of increasing interferon level, classified in class 435, subclass 69.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-IV are mutually exclusive and patentably methods which are substantially different. The multiple methods have different uses, for instance the transgenic plant of Group II is not needed for the method of Group III. The examination of all groups would require different searches in the U.S. Patent Shoes, in house and commercial databases, and scientific literature and would require the consideration of different patentability issues.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
